

# celum toolbox

## Features for CELUM 5 as Cloud Service

### Key Features

- Available for every existing, publicly accessible CELUM installation
- Pure Cloud Service, needs no installation on the server
- SSL (https) to protect your login data
- Feature set adapts to the users role

### Following lists can be displayed and exported:

- Metadata of all assets of a node (also recursive)
- Information fields (localized text and textarea) for translation can be exported and imported
- Overview of all information fields with ID, labels, fieldsets and asset types
- Visualize direct and inherited node permissions including subnodes
- Node structure
- User information, filtering by group & status
- User groups including description and parent and child relations
- User group hierarchy as a directed graph

### Cost

- **Free** for all customers of brix cross media with a CELUM 5 or a Liberty DAM license, as well as customers of easyDAM.ch.
- Other CELUM customers pay CHF 190 (EUR 170) per year for a single account or CHF 390 (EUR 350) per year for all accounts on a server.

All CELUM customers of brix cross media can try it right now by navigating to

<https://celum-toolbox.brix.ch>

Other customers may register there with their CELUM credentials.

### View information at a glance and export with a single click

Need a list of all CELUM users including their E-mail addresses? Unfortunately there's no such feature in CELUM. Want detailed information about node permissions and role assignments? There's no such feature either. Until now!

With the celum toolbox you can generate tables of users, structural data, metadata and translation lists and export them in a format of your choosing. Our application also enables you to filter the data and select which columns should be displayed or exported.

Administrating complex dependencies of user groups can be a challenge. Now, thanks to the group hierarchy graph, you can easily see which group inherits from the other and where it passes on its permissions. Also the role-assignments of groups on nodes can be displayed in a clear form and be exported as a table.

### Assets

#### Metadata Export

Export all assets from a folder to a table with all available metadata

Run

#### Information Field Translation Export

Export all assets from a folder to a table with all available Information Fields

Run

#### Information Field Translation Import

Import information field translations in multiple languages from a spreadsheet

Run

#### Informationfields

Exports all informationfields, fieldset and Media Types

Run

### Nodes

#### Container Permissions

Show direct and inherited permissions of containers and make them available for download

Run

#### Container Structure

Exports a table containing structural information about folders or keywords, suitable for importing using celum's structure

Run

### Users and Groups

#### User Information

Exports a table containing all information about celum users (name, e-mail, address etc.)

Run

#### Group Information

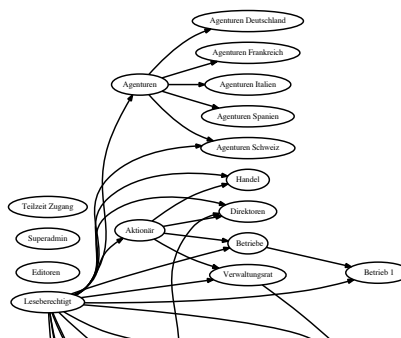

Exports a table containing all information about celum groups (name, includes)

Run

#### Group Hierarchy

Draws a graph of the relationship between user groups (who inherits from whom) and offers the data for download

Run

Example: Group hierarchy graph
